📁 Portfolio

PROFESSIONAL SUMMARY

MS Data Science graduate skilled in Python, SQL, and AWS for architecting scalable ETL pipelines and cloud solutions. Skilled at building generative AI agents using SOTA models for workflows and ,crafting interactive Tableau dashboards that turn complex data into actionable insights, looking for opportunities in cross-functional teams.

EDUCATION

University of Houston

Master's degree in Data Science(CGPA:3.96/4)

Houston, TX
Jan'23 - Dec'24

- **Coursework:** Big Data Analytics,Databases, Data Mining, Machine Learning

Institute of Aeronautical Engineering

B.Tech,Computer Science and Engineering(GPA:9.22/10)

Hyderabad, India
Jun'18 - Aug'22

- **Coursework:** Cloud Computing, DSA, Data Warehousing, Object-Oriented Programming, Web Technologies

EXPERIENCE

Libsys

AI Engineer

Chicago, IL
Aug '25 – Present

- Designing and deploying an internal-use agent chatbot that retrieves organizational documents, answers employee queries, and generates data visualizations and insights to streamline internal knowledge management.
- Developing an AI-powered recruitment and sourcing model to automate candidate search and classification from platforms such as LinkedIn, Dice, Monster etc; applying LLMs, embedding models, and filtering logic to shortlist candidates,
- Building a technician scheduling and routing optimization engine for RTS field services, using the BigQuery and Google Maps APIs to minimize travel time and improve output efficiency by 85% percent.

University of Houston

Research Assistant – Data Science

Houston, TX
Jan '23 – May '25

- Engineered AI agents to automate author disambiguation, gender attribution through NamSor, and centrality metric computation, eradicating repetitive data processing and accelerating scholarly network analysis.
- Developed an interactive AI chatbot to help peers query co-authorship metrics, gender disparity insights, and visualizations, enabling intuitive access to complex research findings without manual data exploration.
- Tutored 150+ students in SQL, Python,Web development through class room sessions; Maintained searchable semester tracking dashboards in Tableau, automating data ingestion via Python scripts to provide insights on grades, attendance.

Capgemini

Cloud Data Engineer

Bengaluru, India
March '22 – Dec '22

- Performed exploratory data analysis and cleansing on raw financial datasets using Pandas, NumPy handling missing values, and embedding validation rules to guarantee 100% data integrity for downstream forecasting models.
- Architected and optimized end-to-end ETL pipelines on AWS: landed raw feeds in Amazon S3; ran transformation jobs via AWS Glue ; and loaded curated tables into Amazon Redshift, cutting data latency by 30% and improving report accuracy.
- Automated pipeline monitoring and alerting with AWS Lambda functions that run scheduled data quality checks, and configured Amazon CloudWatch alarms to surface failures and anomalies - ensuring 99% uptime and immediate response.

Virtusa

Data Analyst

Hyderabad, India
Oct '21 – March '22

- Utilized SQL for data aggregation and manipulation from multiple databases, streamlined the process and significantly improved the efficiency and precision of organ donor data analysis, leading to more reliable insights for decision-making.
- Engineered a Python program to automate the collection and processing of organ donor data from Excel spreadsheets for 30 + regions, reducing the time to collect data by 20% and ensuring faster and more consistent data updates for analysis.
- Facilitated a client in optimizing organ donor outreach efforts using donation analytics visualized through Tableau. This helped improve the effectiveness of donor campaigns and improve overall donation rates through data-driven strategies.

SKILLS

- **Programming:** Python, SQL, JavaScript, Node.js, HTML/CSS, React.js
- **Data Science:** Pandas, NumPy, Machine Learning, Neural Nets, ETL Pipelines, Databases, Data Warehouses, Tableau
- **AI:** Generative AI, AI Agents (ADK, MCP, LangChain), LLMs
- **Cloud Computing:** AWS, Apache Airflow, Docker, Kubernetes, Terraform, Serverless, CI/CD pipelines

PROJECT HIGHLIGHTS

Automated Browser Task Agent

Developed a Python-based browser automation agent to execute arbitrary web workflows, such as automatic authentication, dynamic page navigation, form filling from structured data inputs, and result log in to CSV; engineered asynchronous execution, resilient session management, and comprehensive error handling for reliable unattended operation.

CERTIFICATIONS

- **AWS Certified Solutions Architect – Associate (SAA-C03)**[Link]
- **Infosys Certified Software Programmer**[Link]
