PROFESSIONAL SUMMARY

Data Science Professional with Expertise in Analytics and Cloud Architecture. Skilled in building ETL pipelines and delivering actionable insights using Python, SQL, and AWS. Experienced in working with large datasets, data visualization, and real-time analytics. MS in Data Science, looking for opportunities in cross-functional teams.

EDUCATION

University of Houston

Master's degree in Data Science(CGPA:3.96/4)

Houston, TX
Jan'23 - Dec'24

- **Coursework:** Big Data Analytics, Databases, Data Mining, Machine Learning

Institute of Aeronautical Engineering

B.Tech, Computer Science and Engineering(GPA:9.22/10)

Hyderabad, India
June'18 - June'22

- **Coursework:** Cloud Computing, DSA, Data Warehousing, Object-Oriented Programming, Web Technologies

EXPERIENCE

University of Houston

Research Assistant - Information Science Technology Department

Houston, TX
Jan '23 - Present

- Conducted research on ScholarsDB, working with R scripts for data collection, preprocessing, and utilization in projects such as Compensation study, and AMJ Paper. Contributed to database maintenance and optimization.
- Collaborated with course instructors to design a Full Stack curriculum incorporating the latest technologies. Assisted in grading assignments with accuracy, providing timely feedback to enhance student learning outcomes.
- Guided over 100 students each semester in SQL, Text Mining, and Python Programming, Full stack course fostering critical thinking and analytical skills. Conducted interactive tutorials, lab sessions, and office hours to address student queries.

Capgemini

Cloud Data Engineer

Bengaluru, India
Mar'22 - Dec'22

- Conducted exploratory data analysis (EDA) and data cleaning using Python and SQL, ensuring high data integrity for financial modeling, significantly improving overall data quality and enabling more accurate predictions and actionable insights.
- Developed and optimized complex SQL queries and ETL processes, improving data retrieval efficiency by 30% and accuracy for key financial insights, leading to faster decision-making, improved reporting, and more reliable financial forecasting.
- Utilized AWS services like Redshift, Athena, and CloudWatch for optimized data storage, retrieval, and real-time analytics, improving query performance, automating monitoring tasks, and enhancing reporting capabilities for timely decision-making.

Virtusa

Data Analyst

Hyderabad, India
Oct '21 - Mar '22

- Utilized SQL for data aggregation and manipulation from multiple databases, streamlining the process and significantly improving the efficiency and accuracy of organ donor data analysis, leading to more reliable insights for decision-making.
- Engineered a Python program to automate the collection and processing of organ donor data from Excel spreadsheets for 30+ regions, reducing data collection time by 20% and ensuring faster, more consistent data updates for ongoing analysis.
- Facilitated a client in optimizing organ donor outreach efforts by donation analytics visualized through Tableau. This helped enhance the effectiveness of donor campaigns and improve overall donation rates through data-driven strategies.

SKILLS

- **Programming:** Python, C, SQL, R, JavaScript, Node.js, HTML/CSS
- **Data Engineering:** ETL Pipelines, Data Warehouses, Apache Airflow
- **Cloud Computing:** AWS (EC2, S3, Redshift, RDS, Lambda, VPC), CI/CD, Serverless, Docker, Terraform
- **Databases:** Microsoft SQL, Oracle, MongoDB
- **Data Visualization:** Tableau, PowerBI, MS Excel

PROJECT HIGHLIGHTS

Web-Based House Sales Management System

Developed a real estate platform for managing property listings with a robust database architecture for secure and efficient storage and retrieval. Implemented dynamic property listings, advanced filtering, and personalized user carts to enhance search efficiency by 30%. Automated workflows for property transactions and user management, reducing manual effort. Designed intuitive front-end interfaces and integrated SQL databases, ensuring a seamless user experience.

Three-Tier VPC Network Deployment Using Terraform

Designed and implemented a secure, scalable, and highly available three-tier Virtual Private Cloud (VPC) network on AWS from scratch using Terraform. The architecture included a presentation, application, and database layer, each isolated in separate subnets to enhance security and performance. Leveraged Terraform to automate the provisioning of 10+ components, including VPCs, subnets, NAT Gateways, and Security Groups and ensuring error-free configurations. Enhanced system reliability by maintaining 99.99% uptime and enabling seamless scaling across two availability zones.

CERTIFICATIONS

- AWS Certified Solutions Architect – Associate (SAA-C03)[[Link](#)]
- Infosys Certified Software Programmer[[Link](#)]
